GUORUI HYDRAULIC

Keep the concept seeking excellence, GRH try our best
to create more value for you with products and service.

GUORUI Hydraulic

Supplier of the Whole Hydraulic System

GUORUI Hydraulics manufacture was established in 1986, focusing on R&D, manufacture and sales of hydraulic products. GUORUI Hydraulics owns world top level R&D team, as well as invention patents, sales covers global market. Targeting at vision of Excellence, GUORUI Hydraulics keeps creating more value for customers by quality products, professional technology and experienced service.

645,835 sq.ft Modern Manufacture

Since the opening of 3rd generation modern manufacture in 2015, the total area covers 1,291,669 sq.ft, while the construction area covers 645,835 sq.ft, there are IT machining equipment, test and inspection equipment, meets various requirement of global customers.

Customer First

With leading technology, quality product, and professional service, GUORUI Hydraulics has covered the global market with more than 60 countries and regions, become the strategic partner of many international famous OEM enterprises.

Instant Efficient Service

Technical Team offers accurate solutions to the service, including the product model selection, product test, installation and commissioning, debugging etc., so as to keep in touch with right department of each customer in time and respond to the customer's requirement.

9 Series Products
Covers the Whole Hydraulic Business

As a supplier of hydraulics, our business covers: hydraulic motors, hydraulic control valves, hydraulic gear pumps, power units and hydraulic systems, etc. Products are widely used in construction machinery, agricultural machinery, industry equipment.

GRH Flow Dividers and Gear Motors

Flow Dividers

Introduction of Flow Dividers

Two or several gear motors can be combined to flow divider after being connected by coupling.It guatantees synchronous operation and accuracy of power element like cylinder (Its principle drawing is as follows), hydraulic liquid from the pipe is input into the inlet port and the same amount liquid is distributed to the outlet port by the rotation of gears that with same specification. Obviously, accuracy of flow divider is up to accuracy of gears and relative spare parts.
RYAN has two series for flow divider 1FDF and 2FDF. Flow accuracy and pressure loss are as follows:

Type	Flow Accuracy	Pressure Drop
1FDF	±1.5%—±2%	16-19bar
2FDF	±1.5%—±2%	11-14bar

It should be noted that flow accuracy is also related to the factors below: System pressure, viscosity of hydraulic liquid, load that each power unit bears and overall flow. These factors should be taken into account at time of application.
Flow divider can be integrated with relief valve, check valve and governor valve, protecting system pressure and filling the oil. For specific requirements, please contact **GRH.**

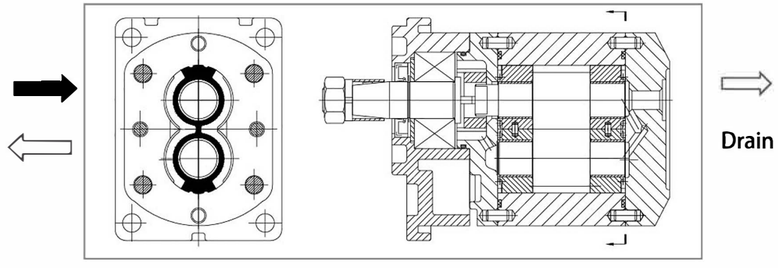
Gear Motors

Introduction of GRH Gear Motors

Gear motors from GUORUI Hydraulics have a floating bushing feature with automatic axial clearance compensation. The bushings are made with special abrasion resistant material providing improved service life. Precisely machined gears ensure our units provide excellent low noise characteristics. Our cold extrusion motor bodies can endure pressures above 30Mpa. High strength cast iron front & rear covers also enhance our reliability. Our units are widely used in the industrial, mobile, marine and aerospace industries.

GRH has 5 series of gear motors: group 1、2、2.5、3 and 3.5. They can be divided into two types. One is the single direction gear motor, the other is the bi-direction gear motors. Normally the design of the single direction gear motor is similar to that of the single direction gear pump with some slight design differences. Therefore, all **GRH** pumps have a corresponding single direction gear motor. When placing your order, please refer to the ordering code.

We now focus on the bi-direction gear motors. This motor has a different sealing structure to the single direction motor. The symmetrical sealing (refer to the bottom drawings) separate high pressure from low pressure thus allowing bi-direction operation. The oil from internal leakage returns to tank through the drain port. Normal case drain pressure is limited to 2 bar, but 5 bar is allowed for intermittent operation. High quality of the bushings, bearings and seals adds to the outstanding performance of **GRH** bi-direction gear motors.



Characteristics

Direction of rotation: bi-direction and single-direction

Permissible ambient temperature range: min = -20 ° C - max = + 60 ° C

Operating pressures: input side P1 max = refer above data; outlet side P2 max =3 bar

Drain pressure: max= 2 bar, Short time: max= 5bar

Fluid temperature range: max=90 ° C for NBR rotary shaft lip-type seal, 100 ° C for FKM rotary shaft lip-type seal

Viscosity range: min=10 mm^2/s-max=600 mm^2/s

Filtration

Recommended Viscosity range: V=30...45mm2/s

Recommended hydraulic fluids use: GB11118-94: L-HM46 or equate NFE-603/DIN515524 II-85

Characteristic curves refer to pages: page 22 to 23

Characteristics

standard	P<2000PSI(14MPa)	2000PSI(14MPa)<P<3050PSI(21MPa)	P>3050PSI(21MPa)
NAS1638	10	9	8
ISO4406	19/16	18/15	17/14
Filter	25 μm	20 μm	10 μm

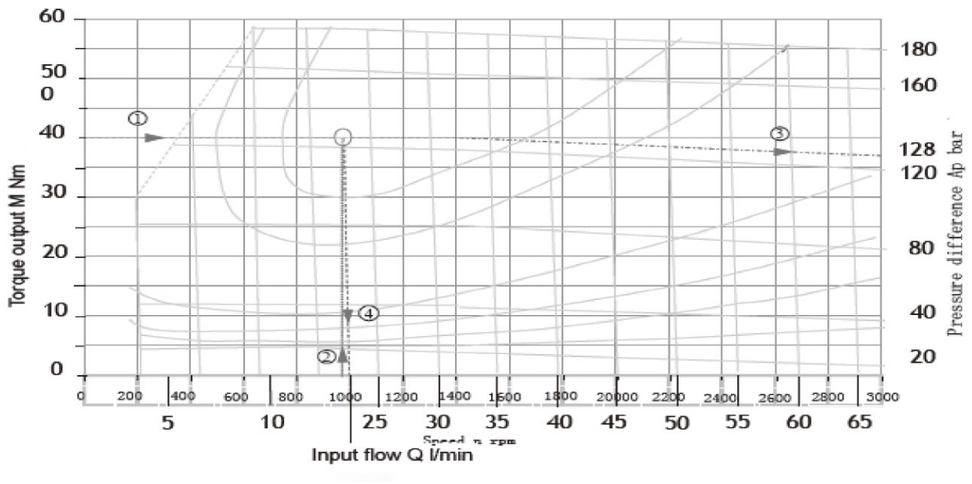
All motor can be combined with relief valve, proportional valve, thermostatic valve.

Guidance for Use of the Curve

In most cases, known: torque output M at speed n, unknown: pressure difference Δp and the required Input flow ;

Example

①M = 40 Nm , ②n = 1000 RPM ; the intersection of ① and ② is the motor operating point with: ③Δp = 123 bar ; ④Q = 21.3l min



Specifications
